Question / Problem:

Does KTA 7.6 support Windows 2019? Is there a difference between Transformation Server/Designer and the rest of KTA?

Answer / Solution:

The entirety of KTA 7.6 supports Windows 2019. The Technical Specifications document states that the Process Orchestration Server (core KTA) supports Windows Server 2019. However, it also lists Transformation Server and Transformation Designer as only supporting up to Windows Server 2016. This is a mistake: KTA 7.6, including Transformation Server and Transformation Designer, supports Windows 2019.
