ReadSoft: How to manually select a value on an invoice page

Summary
19793

Support Article

If a value is unique on a page, start typing the value and the system will automatically select it.

If the automatic selection is not achieving the necessary results, it is possible to disable the option and manually capture the desired value on an invoice. To do this, press and hold Ctrl while selecting the value.

Note: Using Ctrl can affect the way the field is interpreted. Whereas Verify uses OmniPage for field interpretation, by clicking Ctrl, an internal interpretation engine is activated. Because of this different engine, interpretation results may vary.
