Send Image from Kapow (Kofax RPA) to KTA

3018417

Question / Problem:
Is it possible to output Kapow image or binary variable to KTA?
Which variable needs to be mapped?

Answer / Solution:
We don't have any variables that will hold the image or binary values, so we must use text instead. In Kapow, we did the following:

Enter How to here:

1. Add a type with an attribute of type 'long text'
2. Add a variable consuming the long text type (in the binary robot - I made a copy of the robot)
3. Add a 'Convert Variables' step after the 'Extract Screenshot' step
   From = image_binary_2
   Converters = Base64 encode
   To = long text variable
4. Change the variable returned in the return value step to the long text type variable
5. Map a String variable to the Kapow return variable

Applies to:

<table>
<thead>
<tr>
<th>Product</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>KTA</td>
<td>7.X</td>
</tr>
</tbody>
</table>
