Unable to Configure KTA Text and DB Export Connectors. Failing with the following error: "Item has already been added. Key in dictionary: «Field Name» Key being added: «Field Name»"

Question / Problem:

Unable to Configure KTA Text and DB Export Connectors. Failing with the following error: "Item has already been added. Key in dictionary: «Field Name» Key being added: «Field Name»"

Answer / Solution:

In this particular case, we found that one Field has the same name as a Table Field Column name. This prevented any Export Connector from being attached to a class.

Solution: Rename the Field.

Applies to:

<table>
<thead>
<tr>
<th>Product</th>
<th>Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>KTA</td>
<td>7.x</td>
</tr>
</tbody>
</table>
