Add and remove autorun stations by code in eFlow 4.5
3018504

Question / Problem:

Is there a way to programmatically (.NET) add and remove autorun stations definition?

The eFlowCmd.exe AutorunEntryRemove does not work, and I need the functionality of the first removing all definitions and then add again.

Sounds strange maybe but it is to be sure only the relevant definitions are added.

Answer / Solution:

After some digging in CSM.

To remove all configurations:

```csharp
ITisPreconfiguredStationsGroup preConfStnGroup=m_csm.Application.Stations.Preconfigured.DefaultGroup;
while(preConfStnGroup.Stations.Length > 0){
    ITisPreconfiguredStation preConfStation=preConfStnGroup.Stations.ElementAt(0);
    preConfStnGroup.DeleteStation(preConfStation);
}
```

To add configuration (2 examples):

```csharp
ITisPreconfiguredStationsGroup preConfStnGroup = m_csm.Application.Stations.Preconfigured.DefaultGroup;
preConfStnGroup.AddStation("Importar","efSimpleAuto.exe",string.Empty, new string[1] {"KP-TIS-WIN7"},5,true);
preConfStnGroup.AddStation("PageOCR","efProcessShell.exe","AssemblyName:TiS.PageOCR", new string[1] {"KP-TIS-WIN7"},5,true);
```

at CN project we use to have a batch command script using eflowcmd executable:

```bash
cd "E:\Program Files\TIS\eFlow 4\Bin"
REM remove previous AUTORUN stations
efLowCmd AutorunEntryRemove iCash iCasheFlow FilePortal
```

https://knowledge.kofax.com/Top_Image_Systems/Troubleshooting/Add_and_remove_autorun_stations_by_code_in_eFlow_...
As I mentioned the remove command does not work in 4.5.1.700, I assume in other builds it does.

In this change it made sense in code anyway, since I needed other updates as well as this, only possible through coding.
