Kofax TotalAgility - Installation - Is Kofax TotalAgility supported against SQL Server on Azure Virtual Machines (IaaS)

Summary

20420

Applies To

- Kofax TotalAgility v7.4

Question

- Is Kofax TotalAgility a supported installation against a SQL Server on Azure Virtual Machines (VMs)

Answer

- SQL Server on Azure VMs is an Infrastructure-as-a-Service (IaaS) which allows you run SQL Server inside a virtual machine in the cloud. Similar to SQL Database, it is built on standardised hardware that is owned, hosted, and maintained by Microsoft.
- Kofax supports both Kofax TotalAgility OnPremise (OP) and OnPremise Multitenant (OPMT) installations against a SQL Server on an Azure VM.
- We would like to note there could be a variance in performance as the SQL Server is hosted in by Azure and therefore could prove expensive for storing documents.
