KTA 7.5 - Why is the Prerequisite Checker stating that WCF HTTP Activation is not set when it actually is set?

3018764

Question / Problem:

Why is the Prerequisite Checker stating that WCF HTTP Activation is not set when it actually is set?

Answer / Solution:

This is due to a bug in the KTA 7.5 standalone Prerequisite Checker.

The version of the Prerequisite Checker contained in the KTA 7.5 Installer works correctly.

Run the Installer and it will install correctly.
