Kofax TotalAgility - How to test a WebService

20398

**Applies To**
Kofax TotalAgility v7.x

**Question/Scenario**
A customer raises a case where they are using a WebService

**Background**
Web Services can be called/tested within KTA,
They can also be called from Visual Studio and SoapUI - this will identify if the issue lies with the Web Service or with KTA

The Web Service types available are:
SOAP
SOAP WCF
RESTful

The following App Note has been created to describe how we can integrate and test Web Services using the KTA Web Services
APP NOTE - How to call a Web Service.docx

The App Note could also be applied to a customer's Web Service
