Kofax TotalAgility 7.1 - How to add more in depth logging to the Transformation Server

Summary
12494

Question
How would I add more in depth tracing/logging to the Transformation Server for troubleshooting?

Answer
Within the `<system.diagnostics>` tag you'll see the following line

```xml
<add name="TraceLevelSwitch" value="Warning"/>
```

We can set the value to 1 of the below 6 values to gather the corresponding logging

- **Off** - None
- **Error** - Only error messages
- **Warning** - Warning messages and error message
- **Information** - Informational messages, warning messages and error messages.
- **Verbose** - Verbose messages, informational messages, warning messages and error messages.
- **All** - All messages.
