Kofax TotalAgility - HTML does not render on form at runtime

Applies to:
Kofax TotalAgility v7.8 and above

Summary of Issue
In previous versions of TotalAgility, we could use HTML in label text and it would be rendered at runtime e.g. to set the style of the label
From TotalAgility v7.8 onwards, the HTML does not render

Cause
This was an intentional change to prevent XSS (Cross Site Scripting attacks),

Alternatives
We should make use of CSS/Themes/Inline Style/Classes etc to set the style of form controls
