Timeout action of activity does not work
3024461

Question / Problem:
Timeout action of activity does not work.
Even if set several seconds to “Target duration" and “Timeout action" of an activity, the Activity spends time more than
the setting.

Answer / Solution:
The execution and error handling settings are only available for Email, .NET, Web service, Create new job and
Document creation activities.

The Monitoring system task checks for overrun activities and jobs. By default, it is set to run every minute.
So, activities are possible to run more than one minute.
